

FREE DUTCH GRAMMAR CORRECTION PLATFORM

Looking for Sponsors

COMMUNICATE RIGHT IN DUTCH

All rights reserved
2023, Mysoly

Welcome

Marjolein van der Sluis

Co-Founder of Mysoly

To whom it may concern,

Mysoly was founded at the beginning of 2022 to build Data and AI-based online platforms. Our end goal is to support Dutch society and culture by developing a Dutch Grammar Correction Model (LingoDutch) and E-Learning testing solutions (NT2).

While speaking and writing in Dutch is not easy, especially for newcomers, language learners, or engineers who are working on linguistics to find out the correct word order or other grammar rules. Those problems are one of the biggest barriers to social integration and communicative culture. Here the LingoDutch comes as a solution.

We aim to be a "**Dutch grammar correction platform**" with extra features such as giving instant feedback in writing and speaking as well. To do that we are using Machine Learning and NLP techniques for the **first time in the Netherlands and adapting them to Dutch grammar rules**. It will be a social responsibility project of Mysoly to Dutch society. Now the Beta 0.8 version of the platform is live and needs to be trained with more grammar input.

To achieve our goal, we have been working with partners and international teams who are among the best in their fields. One of the team is now working on content development and the other is working on the machine learning part.

To finance our team and continue the development process of LingoDutch, we use our capital. All the profit we made so far as Mysoly has been spent on the training and development of the Dutch Language Grammar Correction Model. However, our budget is very limited as a new start-up and **we need sponsorship to finance the Free Dutch Language Grammar Correction Platform**.

At this point, we are kindly asking you to be our sponsor. We believe that this platform and the model itself will be used by **Dutch institutes, companies, schools, universities, and anyone who needs to communicate in the right way or develop new solutions with LingoDutch data**. They will use Dutch language input in the right order and they can get the expected output at the desired levels.

We are looking forward to hearing from you soon.

Regards,

Marjolein van der Sluis

Co-Founder of Mysoly

Why Sponsorship

LingoDutch is coming up with a precious solution to **the common problems which affect social integration and communication culture.**

There are **different dialects and grammatical use** in the Netherlands which makes the learning process more difficult than expected. Although learners who want to check their grammar can find "taal coaches" or "mentors", it is not an easy solution to get feedback every time.

Even the data engineers working on an adaptation of the Dutch language for giving instant responses to their customers, use translator tools to get the correct output. However, **the translation comes with errors** or the **translator systems change the word order** up to the output language because of the very specific and unique features of the Dutch language.

There must be a tool that has the ability to correct those issues directly and instantly in Dutch. It is LingoDutch:

- *Grammatical Rules (Inverse, om te, etc.)*
- *Word Order*
- *Punctuation*
- *Spelling*
- *Exceptions,*

By sponsoring this project, you will contribute to the future of Dutch language learning methodology. This will affect the **social integration and communication culture** of Dutch society positively.

Together with LingoDutch, The Netherlands community has its own Dutch grammar correction model without the need for translator tools.

Originally Dutch and created in the Netherlands for the whole society!

The platinum sponsor of LingoDutch will have the authority to use the trained data of the Dutch Grammar model with an API as well. It means your IT & DATA Department can also use this model in your systems to understand your customer behavior and responses more clearly.

About Us

Mysoly was founded in February 2022 with a desire to create WEB, AI, and ML-based platforms for different customers. Since the start, all the turnover of Mysoly services has been used to support our vision. It means that we are funding our dreams with the services we sell.

Our vision is to be **one of the key players in developing AI-based online e-learning solutions for everybody to master the language to communicate with others.** We know that we have a long way to run!

Our short-term goal is to support this vision by implementing LingoDutch as a free tool for Dutch society. In that way, we will also get real and organic feedback from learners and use these data to develop the model. The model will be also used for **nt2oefening.nl** which will be the first platform in Dutch language testing to give instant feedback on speaking and writing without mentor support. NT2 Oefening platform will be online in the second half of 2023.

As Mysoly, we are working with contractors in the project base. All our contractors are experts in their field and have a strong background in learning and software development. We are all dedicated to delivering high-quality and innovative solutions.

We are proud to have launched the beta version of LingoDutch, and we believe that LingoDutch has the potential to make a significant impact in the field of language learning and communication. As we look to the future, we are actively **seeking sponsors and partners to bring LingoDutch to a wider audience soon with all features developed.**

Strategy

By using the latest technology, our strategy is to build online AI and ML based platforms.

Goals

Developing a Dutch language testing platform.

Building free Dutch language tools for society.

Success

We have developed a Dutch language grammar correction model (Beta).

We have been working on NT2 Oefening Dutch Language Testing Platform

Package - 1

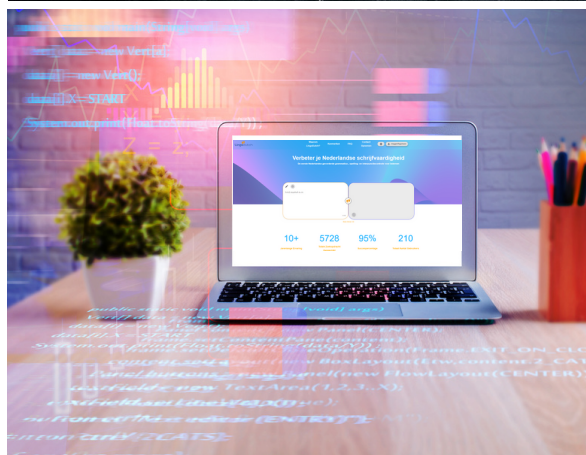

Platinum Sponsor

€ 50.000 / Year

- Mention in social media
- Link to the company website on the sponsor's page of our platform
- Company logo on the sponsor page LingoDutch website.
- API access to use trained data of LingoDutch machine learning grammar correction model.

Important Notice:

The platinum sponsor have a right to access and use the root data of Dutch Grammar Correction model in their data analysis and machine learning algorithms as well without any extra cost.

COMMUNICATE IN DUTCH WITHOUT MISTAKES

Language is where a community integrates socially and culturally. LingoDutch will make a positive contribution to the language development of people who are just learning Dutch and want to integrate.

Package - 2

Diamond Sponsor

€ 15.000 / Year

- Mention in monthly social media shares and newsletters
- Link to the company website on the sponsors page of our platform
- Mention in all public communications

The Diamond sponsor will be one of the great supporters for the future of Dutch language grammarly. The platform will be free and all users will benefit from your huge support.

Package - 3

Bronze Sponsor

€ 5.000 / Year

- Link to the company website on the sponsor's page of our platform
